

Xerox Fax Confirmation

Please follow these instructions to turn on the Fax Confirmation page and save the settings as default.

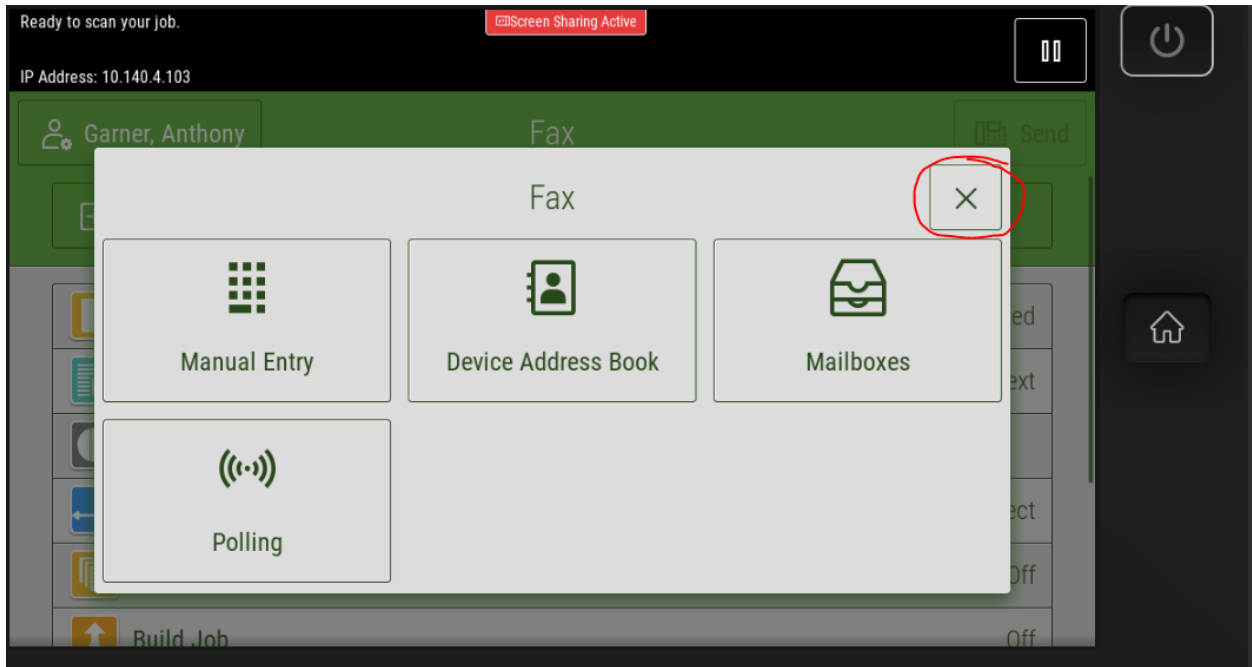

First, log into the printer. You should see the default PaperCut MF screen. Here you will need to select either **Access Device** or press the **Home** button.

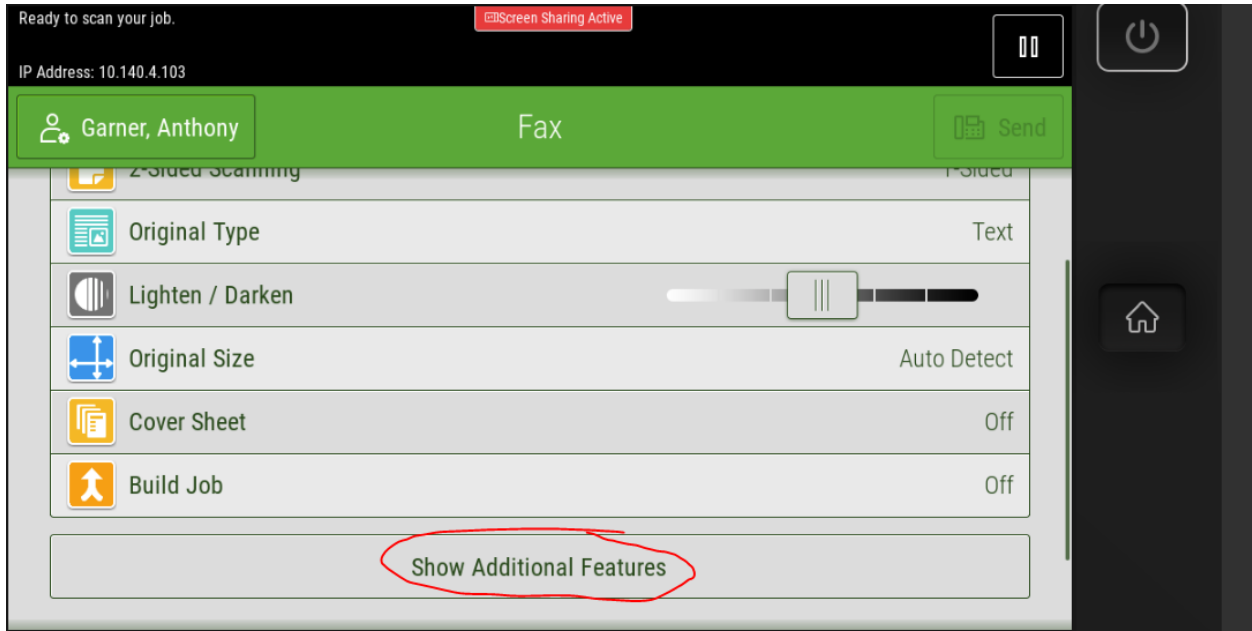

Once you're on the Xerox app screen, locate **Fax** and tap it.

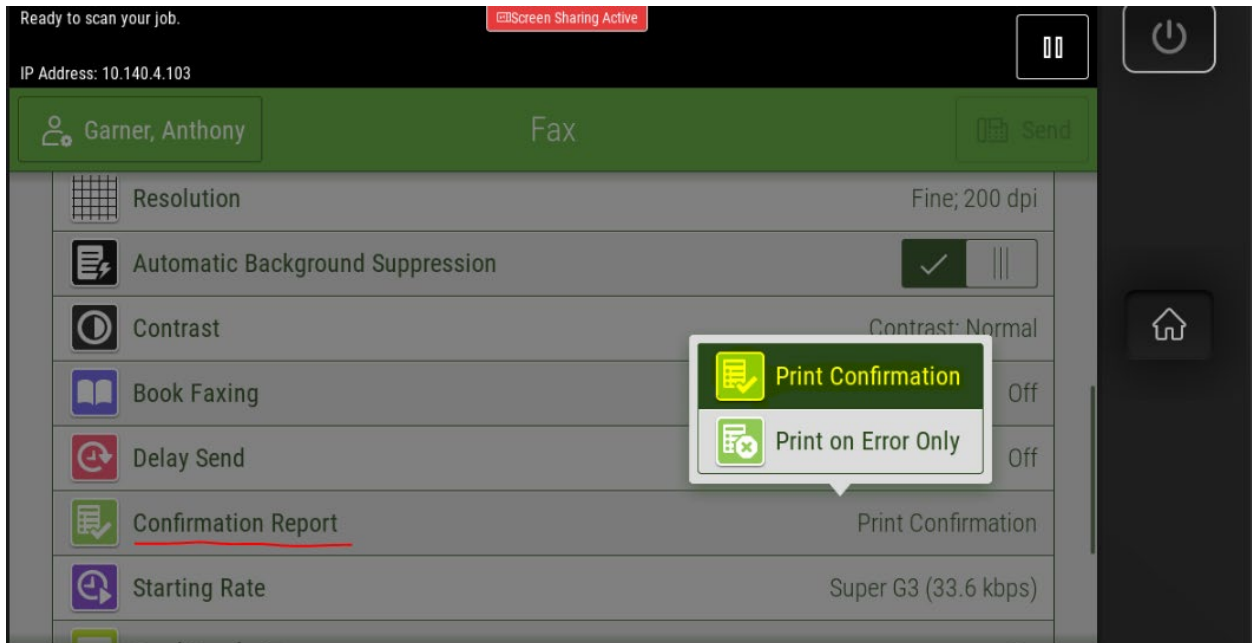

Once the **Fax** app opens, you'll see a window with options come up. Close this for now.

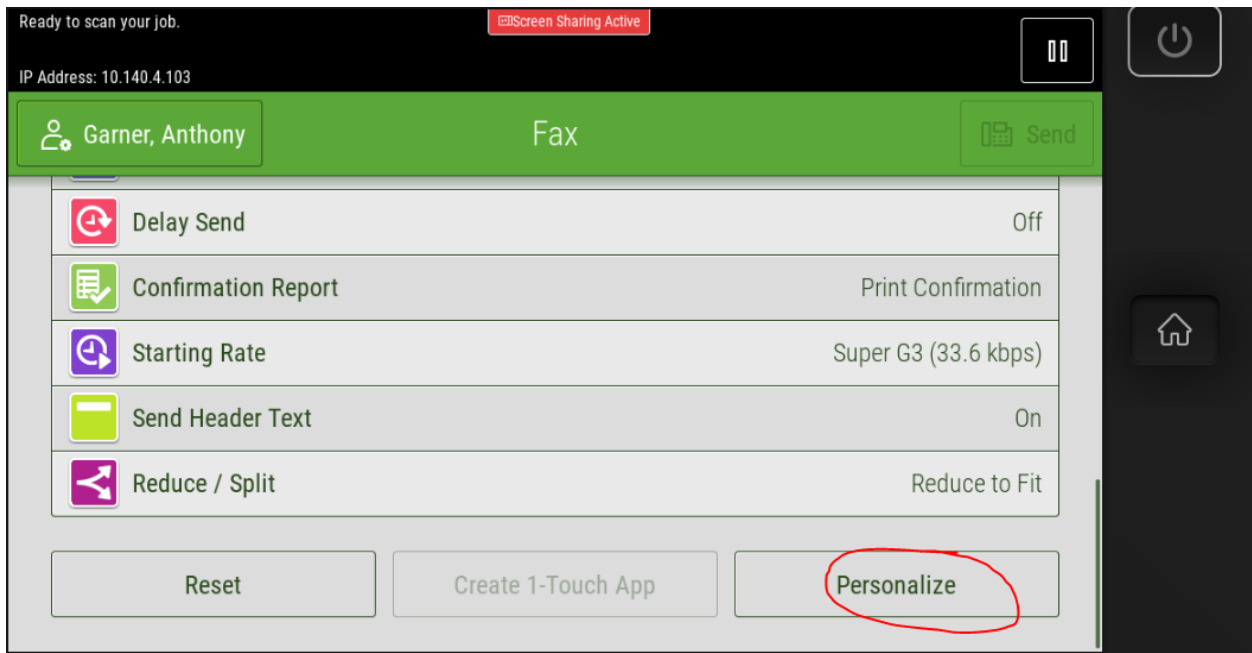

Scroll down on the settings page and select **Show Additional Features**.

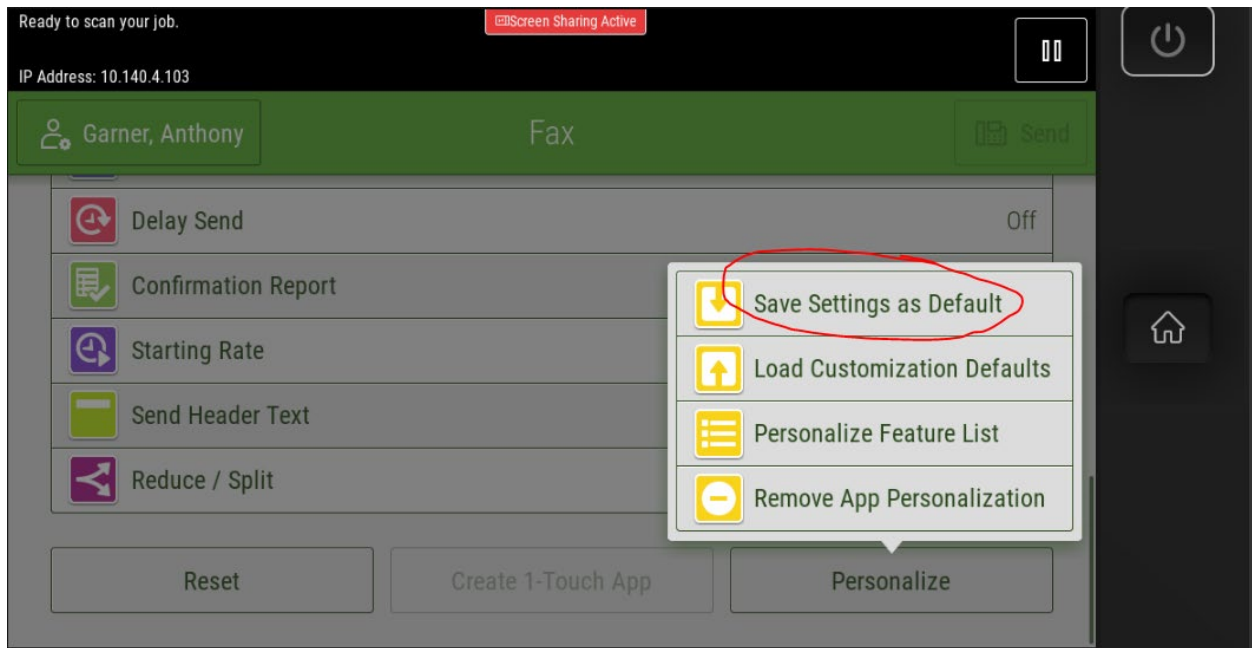

Now scroll down and locate the setting for **Confirmation Report** and select it. Now choose **Print Confirmation**.

Next, we need to save this setting as default so this isn't required each time you want to fax. Scroll down and locate **Personalize** and tap it.

Now select **Save Settings as Default**.

Next, select **Save** to confirm and you're all complete.
